Flora-Grip™*

Plant Tray Handle System

THIS

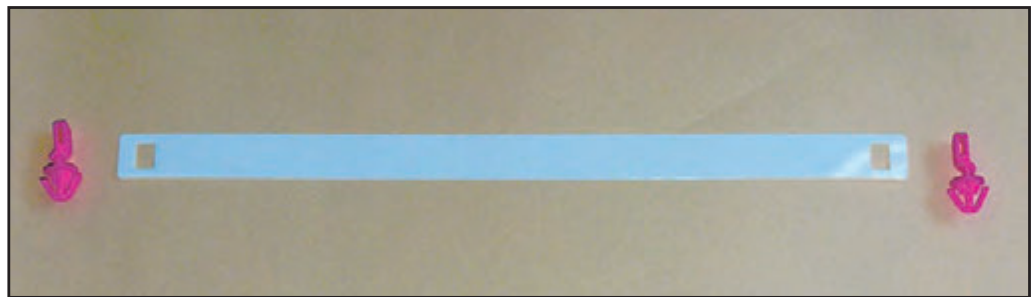

NOT THIS

With Texpak's Flora-Grip™ Plant Tray Handle System you eliminate the risk of plants ending up on the garden center floor

Hooks Available in White, Black and Custom Colors

Handles Available in White, Black, Custom Colors, Printed and In-Plant Printable

Unlike anything else available, finally there is a handle for plant trays that really works. The Flora-Grip™ handle goes on easily and stays attached to the tray. See reverse side for details 

APPLIES FAST • HOLDS TIGHT • COMPETITIVELY PRICED

*Patent pending on the Flora-Grip™ handle, Anchor-Lok™ clips and the entire system

How It Works...

Flora-Grip™

Two Anchor-Lok™ clips are snapped into the 1/2" holes located in the top of the plant tray. The Anchor-Loks™ can be inserted when the tray is empty or after the soil has been placed in the tray but

before the plants are fully grown. Anchor-Loks™ that are not the same color as the tray are easy to locate after the plants have germinated.

As Easy As...

Handle slides over Anchor-Lok...

...easily catches on flared leg...

...and pulls into hook

When the plants are ready to ship or sell, the Flora-Grip™ handle easily slips over the Anchor-Loks™ which securely attaches the handle to the tray. Flora-Grip™ handles can be blank or

printed and need not have straight edges. The only requirement is that the tray has the proper opening at each end to insert the Anchor-Loks™

In short, the Flora-Grip™ handle system attaches faster and is more secure than any other system.
